Pneuron

Orchestrate your enterprise business landscape, much faster

A platform that enables you to solve business problems at a fraction of the time, cost, and risk of traditional paradigms via a solution “fabric” that leverages and orchestrates existing assets

Pneuron™ is a low code product that integrates disparate data on heterogeneous technologies. Data can then be orchestrated to create complex application workflows. It facilitates a low-touch approach to enterprise infrastructure – data is not moved, but data sources and applications in a complex distributed ecosystem are leveraged as-is. Pneuron is the perfect tool for enterprises seeking to leverage value quickly without impacting enterprise initiatives, processes, and resources.

Pneuron approach

Pneuron's graphical, non-invasive approach data sources, record linking, third party BI tools, analytics, models, and third party or existing system to application development allows the agile construction of business functionality without the costly complex aggregation and re-aggregation of data.

Using a library of purpose-built Pneuons, applications are quickly assembled and prototyped.

Pneuons

UST Pneuons reverse the paradigm of centralizing data and system before value creation

Pneuron

Orchestrate your enterprise business landscape, much faster

- Pre-integrated technologies to accelerate time to value
- Visual, configuration driven design
- Loosely coupled, services-oriented model
- No intermediary data layers
- Distributed processing
- Dynamic scaling and resiliency
- Uniformly interoperable components
- Technology-agnostic deployment

Pneuron

Connecting applications, data and processes

Enterprise IT challenges	Unlock valuable IP embedded in legacy or point solutions	Derive and deliver high-value intelligence from multiple, fragmented sources	Rapidly realize business value from disparate systems and technology
Pneuron value proposition	Expose key functionality through rapidly configured and interoperable objects	Analyze (only) targeted data at runtime and perform analytics proximate to source systems	Deploy a virtual, non-invasive integration, processing, and control fabric
Benefits	50% reduction in time for any project involving distributed data sources and/or 3 rd party application integration	Rapidly aggregate data for faster integration without the need for costly and time-consuming data normalization projects	Improve time to value and total cost of ownership (TCO) by 50% while retaining a high degree of solution agility for 70% of current projects
