Overwhelmed by GRC? Create a roadmap with UST

74% of companies that experience a breach attribute the cause to 3rd parties

Managing GRC within your organization is often a daunting task, and it can be hard to know where to start. It's difficult to assess programs related to cybersecurity, privacy, and regulatory compliance. This is due to the complexity and investment involved in developing systems that adhere to multiple frameworks and regulations. UST Secure takes the pain out of that process by providing assessments of your current GRC programs and actionable steps toward long-term resilience.

UST's world-class platform is deployable through Salesforce® and enables continuous improvement to your GRC management programs.

Identify where your organization's strengths and weaknesses exist, with respect to any regulation or framework your industry requires (i.e. NIST, ISO, GDPR & CCPA). We enhance the UST Secure platform with CMMI, allowing you to progress step-by-step towards further GRC maturity. In addition, you can create your own maturity assessments and roll those out to your third-party suppliers and partners, to understand external risks to your business.

- Regulatory compliance: GDPR, CCPA, FFIAC, HIPAA + more
- Framework adherence: NIST CSF, ISO 27001, NIST PF, ISO 27701, NIST 800-53 + more
- TPRM: C-SCRM, GDPR Data Processors, CMMC + more

Why UST Secure?

With world-class cloud deployment using Salesforce®, UST Secure allows you to report to shareholders, vendors, and customers, on the state of your GRC programs. The platform is designed for ease of use, providing a measurable and actionable approach to compliance.

FEATURES OF THE UST SECURE PLATFORM

Secure Platform

Available in Salesforce® Appexchange, the UST Secure platform gives you access to assessments as well as a suite of scores, analytics, and dashboards with data to understand the state of your GRC programs.

GRC Management

Both qualitative and quantitative assessments so you can continuously measure and improve your GRC program using CMMI (Capability Maturity Model Integration).

TPRM

Create your own maturity assessments based on the regulations of your industry and roll those assessments out to your supplier network to create your own TPRM program and minimize external risk.
